

From the source of truth to the record of truth.

We track inventory, assets and people across factories, warehouses and retail and into your existing ERP.

Traceable Quality® · iotready.com

THE PROBLEM

Your ERP and your floor disagree

SAP or Tally, with SOPs or without. The stock in the system still isn't the stock on the shelf.

Operations are organic and constantly evolving. ERPs are rigid and demand structured data. The gap between the two gets filled with manual data entry, which brings errors, delays and decisions made on yesterday's numbers.

Engine: Where Work Flows[™]

Engine is the single-pane operations companion for everyone from the shop floor to the C-suite.

Shared inboxes

Stop CC'ing everyone in the building. Forward it to our smart inbox and AI creates the records and assigns the tasks.

Apps and AI agents

From morning WMS summaries to automated CRM follow-ups; let your staff work smarter, not longer.

Internet of Humans & Things

Mobile apps and IoT devices that work alongside your shopfloor operators for accurate data capture and realtime feedback. Audits will never be smoother.

QR, RFID, BLE or GPS

Track assets, inventory and people as they move across factories, warehouses and retail by hand, on forklifts, conveyors or vehicles.

HOW IT WORKS

Identity + Quantity + Context = Truth

Based on the 5W2H framework, we capture the truth as it happens and give you an audit log you can trust.

Identity

A QR, RFID or NFC mark on the crate, pallet, carton or SKU unit, read off the item itself.

Quantity

Weight from the RS232 scale already on your floor, from 100 g to 100 tonnes.

Context

Supplier, operator, site and time, carried by an offline-first mobile app and a business-rules engine.

The rules engine decides whether a reading is allowed, and only then does a document reach your ERP.

Own Your System Integration

The RFID layer for SAP The IoT layer for Zoho The AI layer for ERPNext The WMS layer for Tally

BYOD

Works with every handheld, scanner and printer. The mobile app configures itself on Zebra, Honeywell or Chainway.

Iterate

Ask our in-app AI 'Engineer' to change business rules or build new apps. Roll back anytime.

Protect

Our cloud, your cloud or on premise. Offline-capable apps and 1s database backups.

Engine comes with 20+ apps out of the box including WMS, OMS, Asset Tracking, CRM and HR - each mouldable to your operations. SOC2 and ISO 27001 under progress.

HARDWARE

We bring the full stack

Profiler

Length, width, height and weight of a carton in one placement, in under two seconds.

ColdTag

A coin-cell BLE sensor that streams temperature live and keeps logging offline.

RFID Reader

One UHF platform for dock doors and gates, or desks and point of sale.

RFID readers, barcode scanners and data loggers are designed and manufactured in house, so there is no third party to blame when an integration misbehaves.
